

Whole Numbers to 10 000

**Quick Review**

You can show the number 1453 in different ways.

- Use Base Ten Blocks.

1 thousand

4 hundreds

5 tens 3 ones

- Use a place-value chart.

Thousands	Hundreds	Tens	Ones
1	4	5	3

- Use **expanded form**. $1453 = 1000 + 400 + 50 + 3$
 ➤ Use words. 1453 is one thousand four hundred fifty-three.

The number 1453 is written in **standard form**.

Every digit has a place value, depending on its position.

Try These

1. Write each number in standard form.

a) two thousand six hundred thirteen 2613

b) $8000 + 600 + 40 + 1$ 8641

Comparing and Ordering Numbers

Quick Review

Here are some ways to order the numbers 3261, 3621, and 2163 from least to greatest.

- Use a place-value chart.

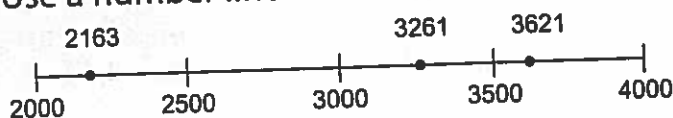

Thousands	Hundreds	Tens	Ones
3	2	6	1
3	6	2	1
2	1	6	3

↓
2163 has the fewest thousands, so it is the least number.

↓
Both 3261 and 3621 have 3 thousands. Compare their hundreds.
 $200 < 600$
So, $3261 < 3621$

< means less than.
> means greater than.

- Use a number line.

From least to greatest: 2163, 3261, 3621

Try These

1. Compare each pair of numbers. Write $>$, $<$, or $=$.

a) $627 > 485$ b) $2641 < 4824$ c) $2683 = 2683$

2. Write the numbers in order from least to greatest.

758, 709, 741 709, 741, 758

3. Write the numbers in order from greatest to least.

7148, 6271, 7285 7285, 7148, 6271

Practice

1. Play this game with a partner.

The object of the game is to make the greater number.

You will need a paper bag containing 10 cards with the digits 0 to 9.

- Draw a card from the bag.
Record the digit in any space in the first row of your game board.
Return the card to the bag.
- Take turns until each player fills all four spaces in a row.
- Compare your numbers.
Write $>$ or $<$ in the box between the numbers.
The player with the greater number wins a point.
- Play two more rounds.
The player with the most points at the end of the game wins.

Estimating Sums

Quick Review

When a question asks "about how many," you can estimate.

Here are some ways to estimate the sum of $294 + 351$.

- Write each number to the closest 100.

294 is closest to 300.

351 is closest to 400.

$$300 + 400 = 700$$

So, $294 + 351$ is about 700.

- Use **front-end estimation**.

Add the first digits of the numbers.

$$200 + 300 = 500$$

So, $294 + 351$ is about 500.

For a closer estimate:

Think about 94 and 51.

This is about $100 + 50 = 150$.

So, $294 + 351$ is about $500 + 150 = 650$.

Try These

1. Estimate each sum.

a) $198 + 389$

Estimate: 600 or 590

b) $119 + 408$

Estimate: 500 or 530

c) $640 + 192$

Estimate: 800 or 830

d) $79 + 272$

Estimate: 350

e) $516 + 482$

Estimate: 1000

f) $291 + 291$

Estimate: 600 or 580

2. William estimated $246 + 585$ as 700.

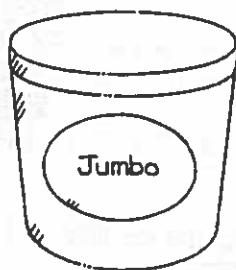

Is his estimate high or low? Explain.

His estimate is low. He probably used front-end estimation, so each

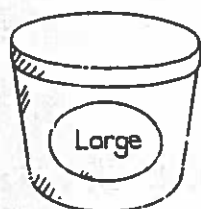

number is rounded down and the estimate is low.

Practice

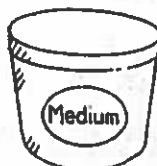

1. About how many beads would you have if you bought these sizes:

149
jumbo beads

285
large beads

399
medium beads

640
small beads

- a) small and large? 900 or 930 b) medium and jumbo? 500 or 550
c) medium and large? 700 or 690 d) jumbo and small? 700 or 790
2. The toy shop sold 117 wind-up cars and 289 battery-operated cars in one week. About how many cars did it sell? 400 or 410
3. Yolanda has a desktop publishing business. She wants to print 1000 items today. She actually prints 352 brochures and 581 flyers today.
a) About how many items did she print? 1000 or 930
b) Did Yolanda reach her goal? Explain.
Sample Answer: No. I rounded up to estimate: $400 + 600 = 1000$
So, I know the actual number is less than 1000.

Using Mental Math to Ac

**Quick Review**

- Use mental math to add: $267 + 197$
Use the strategy of make a "friendly" number.
 197 is $200 - 3$.
Add 200 , then take away 3 .
 $267 + 200 = 467$
 $467 - 3 = 464$
So, $267 + 197 = 464$
- Count on to add: $271 + 580$
Add 271 and 500 . $271 + 500 = 771$
Count on by 10 s eight times.
 $771, 781, 791, 801, 811, 821, 831, 841, 851$
So, $271 + 580 = 851$
- Use mental math to add: $415 + 342$
Use the strategy of "adding on" from left to right.
Add on hundreds, then tens, and then ones.
Think: $415 + 300 + 40 + 2$
Count on 3 hundreds: $415, 515, 615, 715$
Count on 4 tens: $715, 725, 735, 745, 755$
Then add 2: $755 + 2 = 757$
So, $415 + 342 = 757$

200 is a friendly number
because it is easy to add 200.

Try These

1. Use mental math to add.

a) $262 + 345 = \underline{607}$ b) $497 + 222 = \underline{719}$ c) $370 + 163 = \underline{533}$
d) $399 + 544 = \underline{943}$ e) $262 + 290 = \underline{552}$ f) $196 + 341 = \underline{537}$

2. Becky gathered 316 clams and Charlie gathered 286.

How many clams did they gather in all? Use mental math to find out. 602

Practice

Use mental math.

1. Add.

a) $690 + 284 = \underline{974}$

b) $2131 + 3468 = \underline{5599}$

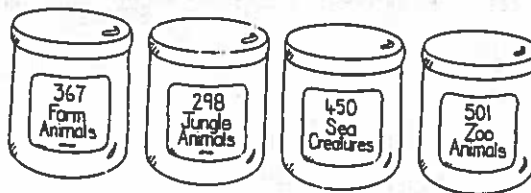

c) $352 + 213 = \underline{565}$

d) $229 + 493 = \underline{722}$

For which problems did you make a "friendly" number? a and d

2. Look at these containers.

If you bought the following groups of animals, how many toy animals would you have?

a) farm animals and zoo animals 868

b) sea creatures and jungle animals 748

c) zoo animals and jungle animals 799

3. Ridgetown has a population of 8317 people.
Mayberry has a population of 1291.

How many people live in the two towns? 9608

4. The cafeteria sold 123 cartons of chocolate milk and 204 cartons of white milk. How many cartons of milk were sold? 327

Stretch Your Thinking

Use mental math to add: $453 + 197 + 205 = \underline{855}$

Describe the strategy you used. I made two friendly numbers.

I added 3 to 197 to get 200 and subtracted 5 from 205 to get 200.

Then I added $453 + 200 + 200 = 853$.

Next, I subtracted 3 and added 5: $853 - 3 = 850$; $850 + 5 = 855$

Adding 4-Digit Numbers

Quick Review

- $1756 + 4828$
Use column addition.

1	7	5	6
+ 4	8	2	8
5	15	7	14
6	5	7	14
6	5	8	4

15 hundreds is 1 thousand 5 hundreds
14 ones is 1 ten 4 ones

- $1756 + 2469$

Add from right to left.

Add the ones.	Add the tens.	Add the hundreds.	Add the thousands.
Regroup.	Regroup.	Regroup.	

$$\begin{array}{r} 1 \\ 1756 \\ + 2469 \\ \hline 5 \end{array}$$

$$\begin{array}{r} 111 \\ 1756 \\ + 2469 \\ \hline 4225 \end{array}$$

Estimate to check that the sum is reasonable.

1756 is close to 2000. 2469 is
close to 2000. $2000 + 2000 = 4000$

4225 is close to 4000.

Estimate: 6000

Practice

1. Play this game with a partner.

You will need:

1 number cube labelled 1 to 6

- Take turns rolling the number cube.
On each roll, both players record the digit rolled in one of the boxes in their first addition grid.
- After 8 rolls, players add.
The player with the greater sum wins.
- Repeat with the other addition grids.

Estimating Differences

Quick Review

Here are some strategies for estimating differences.

- Estimate: $513 - 289$

Write each number
to the nearest 100
and subtract.

$$500 - 300 = 200$$

So, $513 - 289$ is about 200.

- Estimate: $4592 - 2369$

Use front-end estimation.

$$4592 \rightarrow 4000$$

$$2369 \rightarrow 2000$$

$$4000 - 2000 = 2000$$

So, $4592 - 2369$ is about 2000.

To get a closer estimate, write
only one number to the closest 100.

$$513 - 300 = 213.$$

So, $513 - 289$ is about 213.

Use the digits in the thousands
place. Replace the other
digits with zeros.

Try These

1. Estimate each difference.

a) $749 - 263$

b) $504 - 327$

c) $988 - 214$

Estimate: 400 or 449

Estimate: 200 or 204

Estimate: 800 or 788

d) $4580 - 1235$

e) $677 - 48$

f) $6896 - 1583$

Estimate: 3000 or 3580

Estimate: 630 or 627

Estimate: 5000 or 5896

2. Natalie estimated $584 - 126$ as 400. Is her estimate high or low? Explain.

Sample Answer: Her estimate is low. If I write each number to the nearest
hundred to estimate, I get $600 - 100 = 500$. If I write only 126 to the nearest
hundred to get a closer estimate, I get $584 - 100 = 484$. If I subtract
 $584 - 126$, I get 458. Each of these answers is greater than 400.

Practice

1. Use the data in the chart to estimate each difference.

School Lunches Served

Day	Number Served
Monday	286
Tuesday	327
Wednesday	489
Thursday	417
Friday	648

- a) About how many more lunches were served on Friday than on Monday? **300 or 348**
- b) About how many more lunches were served on Thursday than on Tuesday? **100 or 117**
- c) About how many more lunches were served on Wednesday than on Tuesday? **200 or 189**
2. Laleh estimated the difference of 7654 and 4111 as 4000, and Sam estimated the difference as 3500.
- a) How might Laleh have estimated?
 $8000 - 4000 = 4000$
- b) How might Sam have estimated?
 $7500 - 4000 = 3500$
- c) Whose estimate is better? Explain.
Sam's estimate is better. It is closer to the actual difference.

Using Mental Math to Subtract

Quick Review

Here are some strategies for using mental math to subtract.

- Use the strategy of "make a friendly number."

Subtract: $719 - 398$

Add 2 to 398 to make 400.

Add 2 to 719 to make 721.

$721 - 400 = 321$

So, $719 - 398 = 321$

Subtract: $437 - 103$

Subtract 100 instead of 103.

$437 - 100 = 337$

Then subtract 3.

$337 - 3 = 334$

So, $437 - 103 = 334$

- Use the strategy of "counting on."

Subtract: $441 - 230$

Count: 230 $\xrightarrow{+100}$ 330 $\xrightarrow{+100}$ 430 $\xrightarrow{+10}$ 440 $\xrightarrow{+1}$ 441 = 211

So, $441 - 230 = 211$

Describe two ways to find $4000 - 3894$.

Sample Answer

$$\begin{array}{cccccccc} +100 & +1 & +1 & +1 & +1 & +1 & +1 & = 106 \\ \text{3894} & \text{3994} & \text{3995} & \text{3996} & \text{3997} & \text{3998} & \text{3999} & \text{4000} \end{array}$$

(1) **Count on:** 3894, 3994, 3995, 3996, 3997, 3998, 3999, 4000

$$\text{So, } 4000 - 3894 = 106$$

(2) **Use a friendly number. Subtract 3900 instead of 3894.** $4000 - 3900 = 100$

$$\text{Then add 6: } 100 + 6 = 106; \text{ so, } 4000 - 3894 = 106$$
